DIGITAL MEDIA SOLUTION

Professional Multimedia

Digital Media Solution Davinci™/OMAP™/DSP

Our Embedded Module solutions provide everything needed to allow the developer to build a media application around Texas Instruments' Davinci™, OMAP™, or DSP family of processors. The modules allow customers to begin development with a fully functional platform. Additionally, customizable source code allows developers to start with a functional media application, modifying and customizing to create the desired product. DSP/BIOS or Embedded Linux SDKs are available.
